I am newbie and not able to run ios application on iphone 6 plus. Am using simulator and having ios version 8.4.1. i have downloaded xcode-beta-6.0.1.pkg file and it downloaded after that am facing same problem. i have added server & client certificates for iphone 6 plus device in key chain. but i am not able to run app. please someone guide me how to run application on iphone 6 plus. please help. Thanks in advance A: Kindly download latest Xcode Beta 3.0.5 for development environment. Copy the ios beta 4.2.1 to your ios folder and install it. After installing open your xcode and change your deployment target from 8.4.1 to 8.4(iOS 11.4) or 10.2(iOS 12.2). //===== Copyright Valve Corporation, All rights reserved.
